## Hello, I'm Arjav

Driven by a passion for software development and a proven track record of success, I am seeking a challenging role where I can leverage my expertise to drive innovation and lead high-performing teams. With a solid foundation in full-stack development and a demonstrated ability to deliver scalable solutions, I aim to contribute to projects that push the boundaries of technology and deliver tangible results. I am eager to take on new challenges, collaborate with talented professionals, and continue my journey of growth and learning in the dynamic field of software engineering.

## Experience

### Associate Technical Lead

#### Fareportal

April 2023 - Now

- Currently leading the Content Management System 2.0 development which is headless cms used to server dynamic seo and sem pages to users within the Platform Service Team, overseeing the creation of dynamic web pages for SEM and SEO purposes.
- Mentoring and managing a team of 7 developers to ensure the successful delivery of projects and adherence to best practices.
- Collaborating with cross-functional teams to define project scope, objectives, and deliverables.

New Technology Used - React Js, Next Js, Grape Js, RabbitMq

### Senior Software Engineer

#### Fareportal

April 2022 - April 2023

- Transferred to the Retention Team in 2022, spearheaded the development of an audience tagging system.
- Mentored and managed a team of 3 interns, facilitating their transition to full-time developers and enhancing team productivity.
- Conducted a Proof of Concept (POC) on a content management system (CMS) and contributed to the development of new modules for marketing campaigns.

New Technology Used - GRPC, ElasticSearch, Redis, Golang, SQL

### Software Engineer II

#### Fareportal

July 2021 - April 2022

- Led the development of a centralized storage system, "User Service Project," serving as a crucial component for marketing campaigns.
- Managed the integration of user booking data, search data, profile data, and email data into MongoDB and Elasticsearch databases.
- Implemented an event-driven architecture and microservices using C# with NATS messaging system.

Technology used - C#, python, NATS(messaging system), DotNet, MongoDB
